

# Assignment\_1

---

**Due 17 Sep 2018, 11:59pm**

---

- Fork this repository to your GitHub and Clone to your computer.
- Create a folder in your personal CofC webspace called portfolio.
- Inside of portfolio, create an index.html landing page which has a responsive design using the <header>, <nav>, <section>, <footer> special HTML5 divs.
  - The index.html is a landing page for your portfolio of CofC work.
  - The <header> area should have your name (you can omit last name if you like), degree, expected graduation date, professional/career goals/interests. A professional headshot type picture should be to the left of this text, and when the screen resolution is phone-size, the text should go below neatly.
  - The <nav> div should have links to the HOME page (index.html) and at least 3 courses you want to showcase in your portfolio.
    - One of these must be CSCI 215 Website Programming
    - Write out the entire name of the course along with prefix and course number.
  - The <section> tag on index.html should just have some text about the CSCI program you are in at CofC, your experiences, etc.
  - The <footer> should have links to the CSCI and the CofC homepages. Put your email address here in the following sneaky format:  
kbriggsATcofcDOTedu
- Each one of your divs must have at least 3 CSS styles attributes assignments associate with them. All styles should be located in mainstyle.css.
  - You are not allowed to use any packaged templates although you can get color combinations ideas from <http://www.colorcombos.com/> or sites similar to <https://designschool.canva.com/blog/website-color-schemes/>. You must come up with all the styles yourself. You are not allow to use any type of WYSIWYG software in this assignment. All html/CSS must be written from scratch in Webstorm or similar editor.
- For each one of the courses in your portfolio create a sub folder named csci215, etc. Inside of each of these folder should be an html file identical to the parent index.html, but the section should include the course's course description, a link

to a pdf of the syllabus for the course, and anything else you want to say about the course.

- In your csci215 folder's index.html, go ahead and include an Assignment 1 link to the pdf of this assignment.
- For the other courses, you need to have at least 3 links to assignments that you have completed. These should include source code if applicable. If you want to include a course in which you are current enrolled, then just put placeholder inactive links for these assignments for now and upload them as the semester goes along.
- Make sure you commit and push your code to Git and GitHub often.
